MEMORANDUM

To: All Engineering Staff

From: Tan L S

PRACTICAL GROUNDING, BONDING, SHIELDING AND SURGE PROTECTION

We have purchased a book entitled "Practical Grounding, Bonding, Shielding and Surge Protection" and a copy of the table of contents is attached herewith for your information.

The book is available for loan from the Library.

Contents

Preface ix

1 Introduction and basics 1
- 1.1 Introduction 1
- 1.2 Basics of grounding 2
- 1.3 Bonding 4
- 1.4 Lightning and its effect on electrical systems 4
- 1.5 Static charges and the need for bonding 5
- 1.6 Ground electrodes and factors affecting their efficacy 6
- 1.7 Noise in signaling circuits and protective measures such as shielding 8
- 1.8 Surge protection of electronic equipment 9
- 1.9 UPS systems and their role in power quality improvement 10
- 1.10 Case studies 11
- 1.11 Importance of local codes 11
- 1.12 Summary 11

2 Grounding of power supply system neutral 13
- 2.1 Introduction 13
- 2.2 Ungrounded systems 15
- 2.3 Solidly grounded systems 16
- 2.4 Impedance grounding using neutral reactor 18
- 2.5 Resonant grounding using neutral reactor 18
- 2.6 Impedance grounding through neutral resistance 19
- 2.7 Point of grounding 20
- 2.8 Other challenges 21
- 2.9 Summary 23

3 Equipment grounding 24
- 3.1 Introduction 24
- 3.2 Shock hazard 24
- 3.3 Grounding of equipment 27
- 3.4 Operation of protective devices 28
- 3.5 Thermal capability 29
- 3.6 Touch Potential during ground faults 30
- 3.7 Induced voltage problem 30
- 3.8 Mitigation by multiple ground connection 31
- 3.9 Mitigation by reduction of conductor spacing 31

7.3 Bonding of different ground systems as a means of surge proofing 80
7.4 Surges and surge protection.....82
7.5 Principle of surge protection 85
7.6 Surge protection of electronic equipment 86
7.7 Achieving graded surge protection 88
7.8 Positioning and selection of lightning/surge arrestor.....89
7.9 A practical view of surge protection for sensitive equipment.....92
7.10 Summary 101

8 Electrical noise and mitigation 102
8.1 Introduction.....102
8.2 Definition of electrical noise and measures for noise reduction 102
8.3 How are sensitive circuits affected by noise? 105
8.4 Frequency analysis of noise 106
8.5 Categories of noise.....109
8.6 Disturbances from other equipment in the same distribution system....110
8.7 Earth loop as a cause of noise 111
8.8 The ways in which noise can enter a signal cable and its control 113
8.9 More about shielding 117
8.10 Shielded isolation transformer 121
8.11 Avoidance of earth loop.....123
8.12 Use of insulated ground (IG) receptacle 125
8.13 Zero signal reference grid and signal transport ground plane.....126
8.14 Harmonics in electrical systems 128
8.15 Summary 131

9 UPS systems and their grounding practices 132
9.1 Introduction.....132
9.2 Power quality issues.....132
9.3 Definitions of abnormal voltage conditions 134
9.4 Susceptibility and measures to handle voltage abnormalities.....137
9.5 Regulating transformer 137
9.6 Standby sources.....138
9.7 Electromechanical UPS systems 142
9.8 Solid-state UPS systems 144
9.9 Multiple units for redundancy.....146
9.10 Considerations in selection of UPS systems for ADP facilities.....147
9.11 Grounding issues in static UPS configurations 149
9.12 UPS configurations and recommended grounding practices 149
9.13 Summary 153

10 Case studies.....154
10.1 Introduction.....154
10.2 Case study 1 154
10.3 Case study 2 155
10.4 Case study 3 158

3.10 EMI suppression 32
3.11 Metal enclosures for grounding conductors 32
3.12 Grounding connections for surge protection equipment 34
3.13 Sensing of ground faults 34
3.14 Equipotential bonding 35
3.15 Summary 37

4 Lightning, its effect on buildings and electrical systems and protection against lightning 38
4.1 Introduction 38
4.2 Incidence of lightning 41
4.3 Probability of lightning strike 45
4.4 Method of lightning protection 47
4.5 Planning for lightning protection 50
4.6 Improvements to lightning protection 51
4.7 Factors governing decision whether or not to protect 52
4.8 Effect of lightning strike on electrical lines 53
4.9 Summary 54

5 Static electricity and protection 55
5.1 Introduction 55
5.2 What is static electricity? 55
5.3 Generation of charge 56
5.4 Some common examples of static buildup 56
5.5 Energy of spark and its ignition capability 57
5.6 Dangers of static electricity buildup 58
5.7 Control of static electricity 58
5.8 Assessment of static risks and planning prevention 61
5.9 Summary 61

6 Ground electrode system 62
6.1 Introduction 62
6.2 Grounding electrodes 62
6.3 Soil resistance 63
6.4 Measurement of soil resistivity 64
6.5 Resistance of a single rod electrode 68
6.6 Current-carrying capacity of an electrode 70
6.7 Use of multiple ground rods in parallel 71
6.8 Measurement of ground resistance of an electrode 71
6.9 Concrete-encased electrodes 73
6.10 Corrosion problems in electrical grounding systems 75
6.11 Maintenance of grounding system 76
6.12 Chemical electrodes 76
6.13 Summary 78

7 Surge protection of electronic equipment 79
7.1 Introduction 79
7.2 What is a surge? 79

10.5 Case study 4 159
10.6 Case study 5 160
10.7 Case study 6 160
10.8 Case study 7 162
10.9 Case study 8 162

Appendix A: Grounding regulations from various national codes 165

Appendix B: IEE system classification based on grounding practices 182

Appendix C: IEEE exposure classifications 191

Appendix D: Glossary of terms related to grounding 193

Appendix E: Steps to ensure effective substation grounding 201

Appendix F: Course exercises 207

Appendix G: Answer schemes 210

Appendix H: Group activities 221
