FOREWORD

Standards produced by the Commission Internationale de l'Eclairage (CIE) are a concise documentation of data defining aspects of light and lighting, for which international harmony requires such unique definition. CIE Standards are therefore a primary source of internationally accepted and agreed data, which can be taken, essentially unaltered, into universal standard systems.

This document CIE S 015/E:2005 has been prepared by a joint Technical Committee of the CIE Division 5 and CEN/TC 169 "Light and lighting", the secretariat of which was held by DIN, and has been approved by the National Committees of the CIE.
