## Foreword

Standards produced by the Commission Internationale de l'Éclairage (CIE) are a concise documentation of data defining aspects of light and lighting, for which international harmony requires such unique definition. CIE Standards are therefore a primary source of internationally accepted and agreed data, which can be taken, essentially unaltered, into universal standard systems.

This International Standard has been prepared by joint CIE/ISO Technical Committee CIE-TC 3-21 and ISO/TC 159/SC5 WG2. It replaces publication CIE 29.2-1986 and deals with Lighting Requirements for Indoor Work Places.
