MEMORANDUM

To: All Electrical Engineers

From: Tan L S

"BROADBAND TELECOMMUNICATIONS HANDBOOK" BY REGIS J. "BUD" BATES

The Company has purchased a reference book entitled "Broadband Telecommunications Handbook" by Regis J. "Bud" Bates.

The table of contents of the book is attached herewith for your information.

Tan L S

Contents

Acknowledgments		xxi
Chapter 1	Introduction to Telecommunications Concepts	1
	Introduction	2
	Basic Telecommunications Systems	3
	Components of the Telecommunications Networks	5
	The Local Loop	5
	The Movement Toward Fiber Optic Networks	6
	Digital Transfer Systems	8
	The Intelligent Networks of Tomorrow	9
Chapter 2	Telecommunications Systems	11
	Introduction	12
	What Constitutes a Telecommunications System	12
	A Topology of Connections Is Used	14
	The Local Loop	15
	The Telecommunications Network	16
	The Network Hierarchy (Post-1984)	17
	The Public-Switched Network	17
	The North American Numbering Plan	17
	Private Networks	18
	Hybrid Networks	18
	Hooking Things Up	19
	Equipment	19
Chapter 3	Virtual Private Networks	21
	Introduction	22
	History	22
	Intelligent PBX Solution	24
	Virtual Private Networks (VPN)	25
	Internet-Based VPN	27
	Goals	27
	Shared Networks	28

Internet 28
Performance 29
Outsourcing 29
Standard Outsourcing Issues 30
Security 31
Creating the VPN 31
Encryption 32
Key Handling 32
Public Key Cryptography 33
Authentication 33
Router-Based VPN 34
Firewall-Based VPN 35
VPN Specific Boxes 36
Throughput Comparison 36
Remote Management of VPN Components 38
Cost Considerations 38
Proprietary Protocols 39
VoIP VPN 39
Summary 39

Chapter 4 Advanced Intelligent Networks (AIN) 41

Introduction 42
Intelligent Networks 42
Advanced Intelligent Networks (AIN) 44
Information Network Architecture 45
Combining AIN and CTI Services 46
The Intelligent Peripheral 48
Intelligent Peripheral Services 49
Software Architecture: Client, Router, Server 50
The Application 51
Results of AIN 51
Focus 52

Chapter 5 Local Number Portability (LNP) 55

Introduction 56
Three Flavors of LNP 56
The Road to True Local Number Portability 57
Basic LNP Networks 59
The Terminology 61
Before Local Number Portability 62

Number Administration and Call Routing in the Network 63
Location Routing Number (LRN) 63
Using a Database Solution 65
Triggering Mechanisms 66
How Is a Telephone Number Ported? 69
Other Issues 70
Switching Systems 70
Billing, Administration, and Maintenance Systems 70
Signaling 71
Operator Services 71
911 Services 71

Chapter 6 Computer-to-Telephony Integration (CTI) 73

Introduction 74
The Computer World 76
Other Possibilities 79
Why All the Hype? 81
Linking Computers and Communications 83
The Technology Advancement 86
The Final Bond 86

Chapter 7 Signaling System 7 (SS7) 91

Introduction 92
Pre-Signaling System 7 92
Introduction to SS7 94
Purpose of the SS7 Network 95
What Is Out-of-Band Signaling? 95
Why Out-of-Band Signaling? 97
The SS7 Network Architecture 97
SS7 Interconnection 99
Basic Functions of the SS7 Network 99
Signaling Links 100
The Link Architecture 102
Links and Linksets 104
Combined Linksets 104
Routes and Routesets 105
SS7 Protocol Stack 106
Basic Call Set-up with ISUP 108
SS7 Applications 109

Chapter 8 CTI Technologies and Applications 111

Introduction 112
Understanding Computer Telephony Technologies 112
Voice Processing 112
Telephone Network Interfaces 113
Tone Processing 113
Facsimile (Fax) 114
Automatic Speech Recognition (ASR) 114
Text-to-Speech (TTS) 114
Switching 114
Understanding Computer Telephony Solutions 115
Information Access and Processing Applications 115
AudioText 115
Voice Recording for Transaction Logging 115
Technology Enhancements 117
Other Technologies 119
Automated Attendant 120
Integrated Voice Recognition and Response (IVR) 120
Fax-Back and Fax Processing 121
Fax-on-Demand (FOD) 122
Interactive Fax Response (IFR) 122
E-mail Reader 122
Text to Speech and Speech to Text 122
Optical Character Recognition (OCR) 123
Summary 124

Chapter 9 Integrated Services Digital Network (ISDN) 127

Introduction 128
Origins of ISDN 129
Origins of the Standards 129
Interfaces 130
Interface Components 134
NT1 134
NT2 135
TE1 135
TE2 135
TA 135
Physical Delivery 136
The U Interface 137

The Physical Interface 140
Applications of the ISDN Interface 141
Multiple channels 141
Telephone 141
Digital Fax 142
Analog Fax 142
Computer/Video Conferencing 142
Signaling 142
Telemetry 142
Packet Switching 143
Primary Rate ISDN 143
H0 Channels 144
H11 Channels 144
H12 Channels 144
Signaling on the D Channel 145
Installation Problems 146
BRI Application 147
Broadband ISDN 148
Definitions 148
Conclusion 151

Chapter 10 Frame Relay 153

Introduction 154
Frame Relay Defined 154
What Can Frame Relay Bring to the Table? 156
Where People Use Frame Relay 156
The Frame 159
The OSI Protocol Stack and Frame Relay 160
Frame Relay Speeds 164
Frame Relay Access 165
Overall Frame Relay Core Protocols 166
Voice Over Frame Relay 167
Compressing the Information on VoFR 170

Chapter 11 Asynchronous Transfer Mode (ATM) 171

Introduction 172
What Is ATM? 172
Why the Interest in ATM? 174
ATM Protocols 176
Mapping Circuits Through an ATM Network 178

The ATM Layered Architecture 180
ATM Traffic Management 182
Contention Management 184
The Double Leaky Bucket 186
Categories of Service 188
Getting to the Elusive QoS 189
Shaping the Traffic 190
Normal Bandwidth Allocation 191
What Is MPOA? 192

Chapter 12 ATM and Frame Relay Internetworking 195

Introduction 196
ATM and Frame Relay Compared 197
Frame Relay Revisited 198
ATM Revisited 199
The Frame and ATM Merger 200
Transparency Across the Network 201
Frame User to Network Interface (FUNI) 202
Data Exchange Interface (DXI) 203
What Constitutes a Frame? 206
FUNI Interoperability 207
Network Interworking 208
Service Interworking Functions 209
The DXI Interface 210
DXI Mode 1 A/B 211
DXI Protocol Mode 1A 212
DXI Protocol Mode 1B 213
DXI Mode 2 213
DXI Protocol Mode 2 215
Summary 216

Chapter 13 Cable TV Systems 217

Introduction 218
Cable Television Transmission 220
The Cable Infrastructure 221
The Cable Television Distribution System 223
Signal Level 223
Digital Video on Cable TV Systems 225
Forming a Digital Video Signal 226
Key Features of Digital Modulation 226
DTV Solution Introduction 227

Chapter 14 Cable Modem Systems and Technology 231

Introduction 232
Cable TV Technology 234
The New Market 236
System Upgrades 236
Cable Modems 237
Standards 239
Return Path 240
Applications 242
The Combined Corporate and End User Networking Strategies 242
A Final Thought 244

Chapter 15 Data Over Power Lines 247

Introduction 248
Power Line Technology 249
Local Access 250
The Changing Market for Legal and Technical Environments 256
The Converging Markets 259
Enhance Services Through Communications Functionality 260

Chapter 16 xDSL 263

Introduction 264
The Asymmetrical Digital Subscriber Line (ADSL) Defined 265
Modem Technologies 266
The Analog Modem History 267
ISDN Digital Subscriber Line (IDSL) 268
High Speed Digital Subscriber Line (HDSL) 270
Symmetric DSL (SDSL) 272
Asymmetric DSL (ADSL) 272
Rate Adaptive DSL (RADSL) 272
Consumer DSL (CDSL) 273
Very High-speed DSL (VDSL) 273
The Hype of DSL Technologies 275
xDSL Coding Techniques 275
Discreet Multitone 276
Using DMT for the Universal ADSL service (G.Lite) 277
To Split or Not to Split 278
Carrierless Amplitude Phase Modulation (CAP) 280
Provisioning xDSL 281
Final Comment on Deployment 285

Chapter 17 Microwave- and Radio-Based Systems 287

Introduction 288
Other Applications 293
How Do You Make the Right Choices 294
What about Bandwidth? 294
How Much Is Enough? 296
What about Reliability? 296
The Choices Are Leased Lines, Fiber or Microwave 297
Microwave and the Other Wireless Solutions 297
Microwave Radio Solutions 298
Private User Microwave 299

Chapter 18 Local Multipoint Distribution Services (LMDS) 303

Introduction 304
Enter the Competitive Discussion 304
Wireless Local Loop 306
Not For Everyone 307
What of the Bandwidth? 310
Enter Local Multipoint Distribution Services (LMDS) 311
The Reasoning Behind LMDS 311
Network Architectures Available to the Carriers 314
Modulation Techniques 315
Two-way Service 317
Propagation Issues 318

Chapter 19 Specialized Mobile Radio (SMR) 319

Introduction 320
Improved Spectral Efficiency 322
Motorola's VSELP-Coding Signals for Efficient Transmission 323
QAM Modulation 324
Multiplied Channel Capacity 324
The Advantage of Integration 324
A Short Overview to Trunked Radio 325
The Control Channel (CC) 326
Service Areas and Licensing Blocks 328
Innovation and Integration 329
Spectral Efficiency with Frequency Hopping 330
Digital Transition 331
Is There Still a Benefit from Two-way Radio? 331
What Kind of Savings Can Your Business Expect? 332
When Will You Need a Radio Service Provider? 332

Chapter 20 Cellular Communications 333

Introduction 334
Coverage Areas 334
Analog Cellular Systems 335
Log On 336
Monitoring Control Channels 337
Failing Signal 337
Setup of a Call 338
Setup of an Incoming Call 339
Handoff 339
Setting Up the Handoff 340
The Handoff Occurs 340
Completion of the Handoff 341
The Cell Site (Base Station) 341
The Mobile Telephone Switching Office (MTSO) 341
Frequency Reuse Plans and Cell Patterns 342
Overlapping Coverage 343
Cell Site Configurations 344
Sectorized Cell Coverage 345
Tiered Sites 346
Reuse of Frequencies 346
Allocation Of Frequencies 347
Establishing a Call from a Landline to a Mobile 348

Chapter 21 Global Services Mobile Communications (GSM) 351

Introduction 352
GSM Concept and Services 353
The GSM Architecture 354
The Air and Link Interfaces 356
The Modulation Techniques Used 357
Traffic Channel Capacities 357
Control Functions 358
The Data Burst 359
Speech Coding Formats 359
The Network Structured Protocols and Interfaces 359
Final Thoughts on GSM 361

Chapter 22 Personal Communications Services 365

Introduction 366
Digital Systems 366

Digital Cellular Evolution 368
Time Division Multiple Access (TDMA) 368
Advantages of TDMA 369
Enhanced TDMA 370
CDMA 371
Spread Spectrum Services 371
Seamless Networking with IS241 and SS7 372
Automatic Roaming 372
Cellular and PCS Suppliers 373
Final Thoughts 374

Chapter 23 Wireless Data Communications (Mobile IP) 377

Introduction 378
IP Routing 380
Part of the Solution 381
Applications that Demand Mobile IP 383
Speed Isn't Everything 384
Variations in Data Communications (Wireless) 385
Possible Drawbacks with Wireless 385
Pros and Cons to Wireless 387

Chapter 24 Satellite Communications Networking 389

Introduction 390
Uses of Satellites in Agriculture 390
Uses of Satellites in Oceanography 390
Commercial Providers 391
History of Satellites 391
How Do Satellites Work? 392
Satellite Frequency Bands 393
Geosynchronous Earth Orbit (GEO) Satellites 394
Medium Earth Orbit (MEO) Satellites 395
Low Earth Orbit (LEO) Satellites 395
Orbital Slots 395
Communications 396
Satellite Installations 396
LEO versus GEO 400
Niches in the GEO Sphere 400
LEO Meets GEO 401
Space Security Unit 401

The Market for the Network 401
Satellite Characteristics 404
Latency 405
Noise 405
Bandwidth 406
Advantages 406
TCP/IP Over Satellite 406
Satellite and ATM 408
Charting the Rules for the Internet 409
Tailoring IP Can Accelerate Throughput 410

Chapter 25 Low Earth Orbit Satellites (LEOs) 413

Introduction 414
Low-Earth Orbit 415
So What Happened? 420
The Benefits of These Service Offerings 421
Deployment and Spacing of Satellites 422
The Space Segment 424
The Cell Patterns 425
Traffic Carrying Capacity 426
Modulation Techniques 427
The Gateway Segment 427
The Earth Terminal 427
The Switching Equipment 428
Interconnecting to the PSTN 428
The System Control Portion 428
Other Competitors to Iridium 429
LORAL-QUALCOMM 429

Chapter 26 The T Carrier Systems (T1/T2 and T3) 431

Introduction 432
The Difference Between T-x and DS-x 433
DS-1 Framing Review 434
Pulse Coded Modulation (PCM) 435
The E-1 Pattern 438
The Framing Protocols: D4 Framing 438
Contrasting the E-1 and DS-1 Frame 439
Extended Superframe Format (ESF) 440
Other Restrictions 442
B8ZS 442

T-2 Transmission (or DS-2) 443
DS-2 Bit Stuffing 445
Framing Bits for the DS-2 445
DS-3 Service (T-3) 447
The DS-3 Frame Format 447
DS-3 Bit Stuffing 448
The DS-3 Overhead Bits 449

Chapter 27 SONET and SDH 451

Introduction 452
Background Leading to SONET Development 452
Synchronizing the Digital Signals 453
The SONET Signal 454
Why Bother Synchronizing? 455
The SONET Frame 456
Overhead 456
Inside the STS-1 Frame 459
SONET Overhead 460
Section Overhead 461
Line Overhead 462
Path Overhead 464
Virtual Tributaries 466
SONET Multiplexing Functions 466
ADD-Drop Multiplexing: A SONET Benefit 467
SONET Topologies 468
Point-to-Point 469
Point-to-Multipoint 469
Hub and Spoke 470
Ring 471
Evolution of SONET in the Rest of the World 472
Synchronous Digital Hierarchy 473

Chapter 28 Wave Division Multiplexing 475

Introduction 476
Wave Division Multiplexing 476
Fiber Optics Summarized 478
Multi Mode Fiber 480
Graded Index Fiber Optics 481
Single Mode Fiber 481
Benefits of Fiber Over Other Forms of Media 482

Wave Division Multiplexing 482
Why DWDM? 484

Chapter 29 The Internet 489

Introduction 490
A Brief History 490
Early Internet Services 493
GOPHER 493
Veronica 494
WAIS 494
WWW 494
Browsers 495
Hypertext 495
Hyperlink 496
URL 497
DNS 497
JAVA 498
Surfing the Web 499
Tracking Visitors 499
Cookies 500
Search Engines 501
Standards 501
Internet Operation 502
Connectionless Network Services 506
Options and Padding 508
TCP 509
The Fields in the TCP Header 510
UDP 511
IP Addressing 512
Routers Versus Gateways 512
Subnetting 515
Network Address Translation 516
DNHC, BOOTP, ARP, RARP 517
Routing 517
Dynamic Routing Tables 520
Routing Versus Switching 522
Real-time Applications 522
MLPS 523
Summary 523

Chapter 30 Voice-over IP (VoIP) 525

Introduction 526
Voice over the Internet Protocol 528
Quality of Service 529
Applications for VoIP 531
H.323 Protocol Suites 534
Delay and Jitter on VoIP Networks 537
Protocol Stack 539

Chapter 31 Intranets and Extranets 541

Introduction 542
Managing the Intranet 543
Web Page Organization 544
Document Security 546
Collaboration 546
Maintaining Interest 547
Jokes 547
Forms 547
Transition Intranet Solutions 548
Portal Products or Customized Web Pages 548
Building a Community 549
Bulletin Board Service 550
Customer Service 551
Thin Clients 551
Extranets 552
Inventory Management 552
  Wholesale 552
  Secondary Markets 553
Privacy Issues 553
Perishable Goods Application 555
Purchasing Cooperatives 556
Outsourcing 557
Computer Hardware Vendor 558
Automating Customer Service 559
Implementing Extranets 561
Intranet 561
Extranet 561
TCP filtering 562
Stand-alone System 564
Virus Checking 566

Firewall Rules Bases 566
Firewall Performance (Again) 568
Proxies 569
Forward Proxy 569
Reverse Proxy 569
Proxy Security 571
Administration 572
Firewall 572
Proxy 573
DNS 573
Fungible Services 574

Chapter 32 Network Management SNMP 575

Introduction 576
Network Management Goals 576
History 577
Network Management Function Interaction 579
Database Structure 581
Architecture 582
Architecture 583
Network Management System Issues 585
Bundling 585
The GUI 586
Network Size 586
Web Enabled GUI 587
Alarm History 587
Alarm Presentation 588
Statistics 588
Free Trials 589
Network Mapping 589
SNMPv3 592
Security 593
JAVA 595

Index 597
