MEMORANDUM

To: All Engineering Staff

From: Andrew Loh

CLEANROOM MICROBIOLOGY FOR THE NON-MICROBIOLOGIST (second Edition)

Please be informed that we have purchased a copy of Cleanroom Microbiology for the Non-Microbiologist and is kept in the Library for reference by the Staff.

ANDREW LOH

CONTENTS

1 The Scope of Microbiology 1

I. Introduction 1
II. Cells 3
III. Binomial Nomenclature 3
IV. Morphology 4
V. Specific Microbial Groups 5
A. Bacteria 5
1. The Gram Stain 8
2. External Features of Bacterial Cells 10
3. The Bacterial Interior 14
4. Bacterial Genetics 16
B. Fungi 18
1. Molds 18
2. Yeasts 20
C. Algae 21
D. Protozoa 22
E. Viruses 23
1. The Viral Infection Cycle 25
2. Retroviruses 27
3. Oncoviruses 27
4. Viruses and Gene Therapy 27
F. Subviral Particles 28
1. Viroids 28
2. Satellite RNA 28
3. Prions 28
VI. Taxonomy of Microorganisms 29
VII. Microscopy 30
A. Light Microscopy 31
1. Staining 31
2. Types of Light Microscopes 33

B. Electron Microscopy 34
VIII. Summary 37

2 Growth of Microorganisms 39
I. Introduction 39
A. Scientific Notation 40
II. Growth of Bacteria 40
A. Nutritional Requirements 40
B. Environmental Requirements 43
1. Temperature 43
2. Atmosphere 44
3. pH 47
C. Binary Fission and the Bacterial Growth Curve 48
1. Microbe Math 48
2. Characteristics of Bacterial Populations 49
3. The Growth Curve 50
D. Continuous Growth 53
E. Determining Bacterial Populations in Cultures 54
1. The Viable Plate Count 55
2. Filtration Methods 59
3. Total Cell Counts 59
4. Instrumental Methods 61
F. Microorganisms as Tools 65
III. Growing Other Microorganisms: Fungi, Protozoa, Algae, and Viruses 66
A. Fungi 66
B. Protozoa and Algae 67
C. Viruses 67
1. Counting Viruses 68
IV. Aseptic Technique 68
V. Safety Issues 70
VI. Summary 71

3 Controlling Growth and Activities of Microorganisms 73
I. Introduction 73
II. Definitions 73
III. Physical Methods of Control 74
A. The Kinetics of Microbial Death 74
B. Heat 77
1. Moist Heat 77
2. Dry Heat 81
3. Sterilizing Large Loads 82
C. Low Temperatures 84
D. Radiation 84
1. Ionizing Radiation 85
2. Nonionizing Radiation 86

E. Filtration 88
1. Depth Filters 89
2. Membrane Filters 89
3. Mechanisms of Filtration 89
4. Validation of Filtration Sterilization 91
IV. Ensuring Sterility 92
A. Overkill Method 92
B. Bioburden Method 93
C. Validation of Sterilization Processes 94
D. Maintaining Sterility 95
V. Chemical Methods of Control 96
A. Definitions 96
B. Factors Influencing Antimicrobial Chemical Agents 97
C. Disinfectants 99
1. Characteristics of Specific Agents 99
2. Selection of Disinfectants 101
3. Validation of Disinfectants 102
4. Rotation of Disinfectants 103
D. Sterilants 104
1. Characteristics of Specific Agents 104
E. Antibiotics 106
VI. Control of Microorganisms in High-Purity Water Systems 107
A. The Need for Pure Water 107
B. Water Purification Methods 108
C. Biofilms 110
VII. Summary 111

4 Cleanroom Facilities and Personnel Controls 113
I. Introduction 113
II. Certified Cleanrooms 114
III. Bioclean Facilities — Viable vs. Nonviable Particles 115
IV. Clean Facilities — General Considerations 116
V. Unidirectional Air Flow 117
VI. HEPA and ULPA Filters 120
VII. Aseptic Fill Areas 123
VIII. Barriers, Clean Zones, and Isolators 124
A. Biological Safety Cabinets 124
1. Class I BSCs 125
2. Class II BSCs 125
3. Class III BSCs 128
4. Proper BSC Operation 129
5. BSC Certification 130
B. Isolators 131
C. Clean Benches 134
IX. Biosafety Levels 134
A. BSL4 Facilities 137
B. Positive-Pressure Personnel Suits 137

X. Cleanroom Garments 137
A. Correct Gowning Procedures 139
B. Sterile Gowning 142
XI. Personnel Practices and Training 142
XII. Personal Hygiene 143
XIII. General Personnel Practices 144
XIV. Summary 145

5 Detection and Enumeration of Microorganisms in the Cleanroom 147
I. Introduction 147
II. Overview of Microbiological Environmental Monitoring 147
A. Validation 147
B. Monitoring Techniques 148
1. General Considerations 148
2. Sampling Sites 151
3. Frequency of Sampling 152
4. Transporting Microbiological Samples 152
III. Monitoring of Air 153
A. Air Samplers 153
1. The Andersen Sampler 153
2. The Slit Sampler 155
3. Portable Samplers 156
4. Liquid Impingers 159
5. Sampler Efficiencies 161
IV. Fallout Methods 162
V. Surface Monitoring 163
VI. Touch Plates and Other Personnel Monitoring 166
VII. Microbiological Assessment of Liquids 167
VIII. Microbiological Assessment of Solids and Semisolids 168
IX. Monitoring for Specific Microorganisms 169
A. Bacteria 169
1. Bacterial Nutrition and Choice of Growth Media 169
B. Fungi 171
1. Fungal Nutrition and Choice of Growth Media 171
X. Rapid Methods of Identification 172
XI. Testing for Bacteriostasis and Fungistasis 173
XII. Detection of Biofilms 174
XIII. Sterile Media Fill Tests 175
XIV. Alert and Action Levels 175
XV. The Sterility Suite 176
XVI. Disposal of Cultures 176
XVII. Summary 176
