Date of Issue

Computation of percentage of water fitting under WELS for Furama Singapore

Ref.	Water Fitting Type	WELS			No Approved Rating	Total no. Based on fitting type	
		Excellent	Very Good	Good			
1	Shower taps and mixers	109	0	0	743	852	852
2	showerheads	103	0	0	743	846	
3	Basic taps and mixers	58	0	0	420	478	478
4	Sink/bib taps and mixers	8	0	0	17	25	
5	Flushing Cisterns	488	0	0	0	488	
6	Urinal and Urinal Flush valves	8	0	0	19	27	27

TENANT SATISFACTION SURVEY							
Suggestions for Improvement			Plan and Take Corrective Action				
1st Storey		Unit No	Department	OIC	Time Line	Remarks	
1	Toilet is clean but still very stink. Toilet paper always not enough.	#01-07	Housekeeping	Melvin	On-going	Check more often.	
2	Toilet roll holders should be beside toilet seat not outside toilet.	#01-25	BMO	Melvin	On-going	neater and no more blockage. Under monitoring	
3	Leakage always happens, causing much inconveniences.	#01-12	Engineering	Aziz	Aug-09		
4	There always been problems with ceiling & aircon in most units	#01-12	Engineering	Aziz	Aug-09	Check all motorised valves and thermostats in all rooms	
5	Aircon should be maintained or upgraded. Even within the unit, different units have different have different temperatures.	#01-25	Engineering	Aziz	Aug-09	Check all motorised valves and thermostats in all rooms	
6	Smoking in Level 1 toilet & sometimes in Level 2.	#01-26	Security	Moses	On-going	More Security patrols.	
7	Annexure of 3 items attached as follows: 1. Airconditioning not consistent; 2. No rubbish bins at the exterior; 3 Aloof staff attitude	#01-08/11 /12/13	Engineering BMO	Aziz Michael	25/07/09	Check all motorised valves and thermostats in all rooms.A litter bin without lid placed on 29/07/09. for item 2.	
2nd Storey							
1	Lighting level of Hotel Lobby & corridors not too dim.	#02-04	Hotel				
2	Artificial green plant display on lobby wall. Suggest to take away otherwise make the lobby dim and can't meet the requirement of Fong Shui.		Hotel				
3	Seating chairs and lobby lounge chairs need change. The design is not suitable for a 4th star hotel.		Hotel				
4	Direction sign on ceiling of walking area need to arrange.		BMO	Agnes	Sep-09	Obtain proposal with quote from Tempo Design	
5	Air quality needs to be improved. Some tenant still burn incense or even smoke in premises. There is a queer food smell or toilet smell that rafts through the central airconditioning at times. Even exhaust fumes some times. Aircon is still way way too cold for comfort.	#02-05	Engineering BMO	Aziz Michael	27/07/09	Tenant informed. Charcoal purchased and placed in AHU 3-3, 3-4, 3-5 rooms at 3rd Sty) and Bin Centre. Arranging for charcoal to be placed .in 1st & 2nd sty AHU rooms.	
6	Install temperature control in the shop units as everytime in the evenings and wnever it rains, the temperature is very cold, sometimes 20°C, even after adjusting the aircon ducts already.	#02-05A	Engineering	Aziz	Aug-09	Check all motorised valves and thermostats in all rooms	
7	Please adjust airconditioning temperature. Its too cold.	#02-07	Engineering	Aziz	Aug-09	Check all motorised valves and thermostats in all rooms	
8	Noise Level in Common Area - after 6.00pm usually some passerby sitting on the curb comfortably between unit #02-05 to #02-10 and chatting through their mobile phone at very high pitch which is quite	#02-10	Security	Moses	On-going	More Security patrols.	
9	Elevators - Since October 2008 my office was relocated here and I noticed that the Elevator leading to B1 and B2 car park has been out of order many times.		Engineering	Aziz	On-going	To monitor closely and request OTIS to rpovide historical servicing record	
10	Entrance to the Car Park - Some unreasonable taxi drivers stop their vehicles infront of the car park entrance when discharging their passengers to the Hotel. This will prevent our vehicle entering the car park and cause unnecessary traffic jam which can be dangerous.		Security	Moses	On-going	Security officers to be more attentive and direct the traffic more stringently to prevent obstruction.

▪ Summary of the Findings

A summary of the findings is as follows:

- The average tonnage for the measured plant room is 400RT with a maximum of 550RT and minimum of 250RT during operating hour.
- High tonnage occurrence are from 150RT to 450RT. Each tonnage bin has substantial occurrence and part load conditions can be quite stable and spectrum of cooling load can be quite spread out in the above 2 high occurrence spectrum.
- The average plant room efficiency read 1.25kW/Ton (during peak office hours) with both minimum and maximum of 1kW/Ton and 1.5kW/ton respectively when taken into 24hrs operation.
- The main factors which contribute to energy wastage are
    - Chiller capacity is slightly less than cooling capacity
    - over-designed and usage of chilled water pumps,
    - over-designed of usage condenser pumps,
    - Chiller operating at low part load
    - lack of energy control features for optimization.

5. AIR-CONDITIONING SYSTEM: CHILLED WATER PLANTROOM SYSTEM

▪ Introduction of Existing System Design

The current Chiller Plant Room comprises of 3 water cooled chillers and 3 sets of chilled/condenser water pumps and cooling towers. The Chiller Plant is more than 10 years and the following table shows the list of equipment installed and their year of commissioning:

Type of Equipment	Model No.	Design Capacity	Year of Commissioned	Remarks
Chillers	Trane	3 X 420 RT	1997	
CHW Pumps	Crane Deming	3 X 55 kW	1997	
CW Pumps	Crane Deming	3 X 45 kW	1997	
Cooling Tower	Shinwa	3 X (2 X 7.5 kW)	1997	

6. OBSERVATION

- **Overall Cooling Tonnage**

The chilled water flow rate and chilled water supply and return temperatures measured are used to compute the total cooling tonnage/ refrigerant tonnage (RT) using following equation.

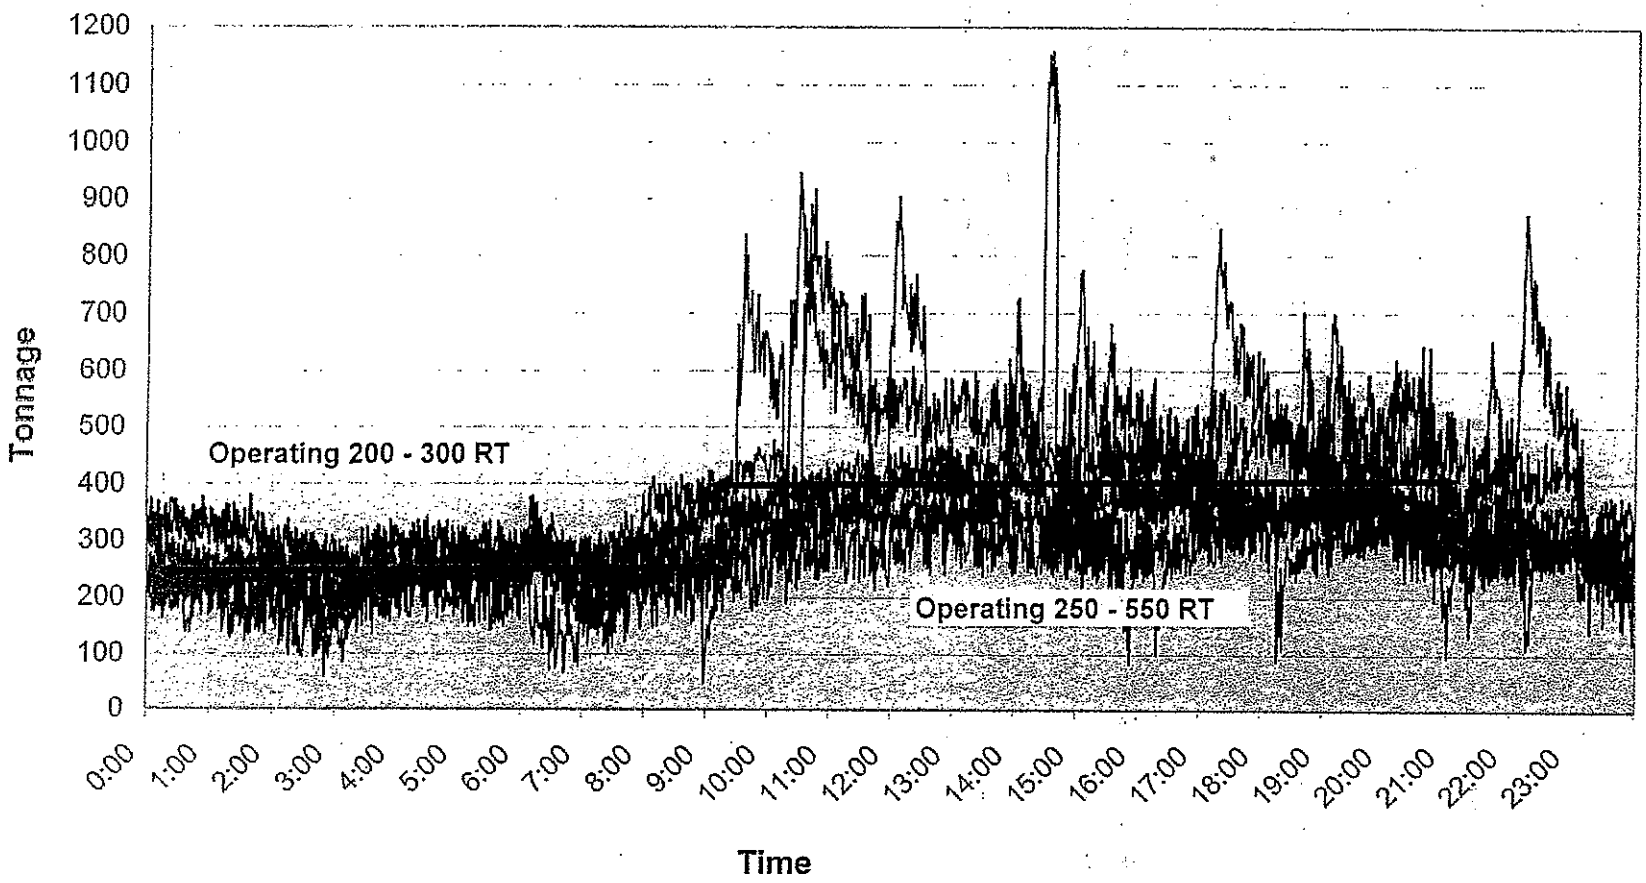

$$RT = \frac{(\text{CHWR Temp} - \text{CHWS Temp})^{\circ}F \times (\text{CHWR Flow}) \text{ USGPM}}{24}$$

The operating condition is relatively stable between (0900hrs to 2100hrs) and (2100hrs to 0900hrs) daily. As such, all plant room parameters (Key Performance Indicators) are evaluated between these hours. During the audit phase, the installation of chilled water distribution system was observed as below:

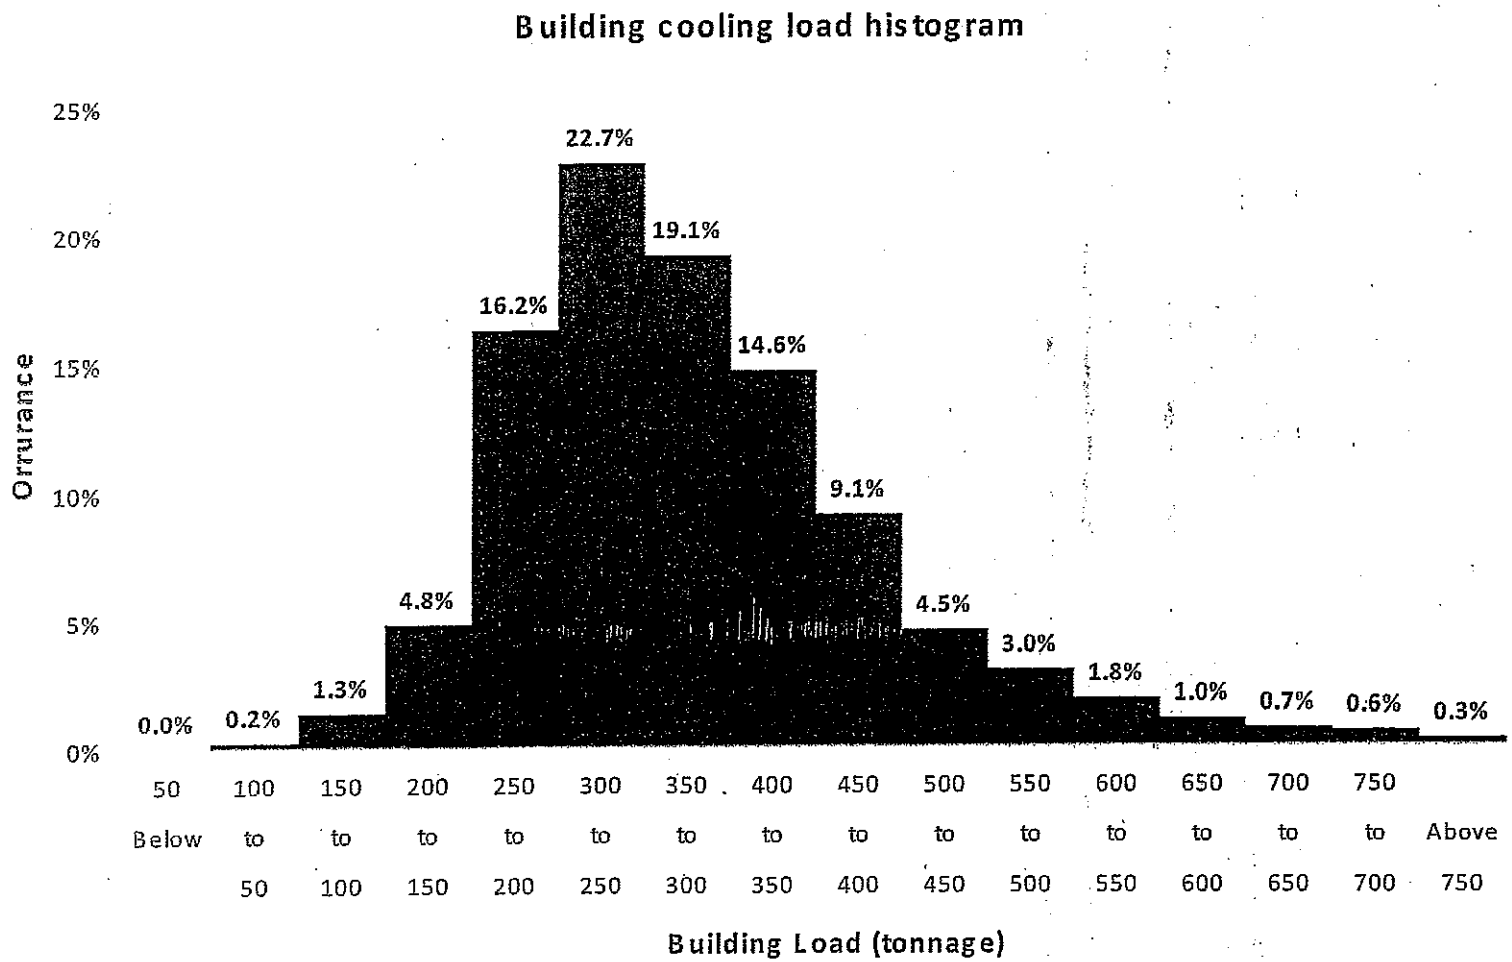

Parameters	Value Based on 0900hrs till 2100hrs		Remarks (If Any)	Plot
Capacity (Ton)	Max.	550	Observation	L-1
	Avg.	400	Calculation	
	Min.	250	Observation	

Parameters	Value Based on 2100hrs till 0900hrs		Remarks (If Any)	Plot
Capacity (Ton)	Max.	300	Observation	L-1
	Avg.	250	Calculation	
	Min.	200	Observation

Plot E-3

7. RESULTS AND ANALYSIS

- **Plantroom Power and System Efficiency**

The total power consumed by the chillers, chilled/condenser water pumps and cooling towers were also measured and used to estimate the system efficiency using the following relationship.

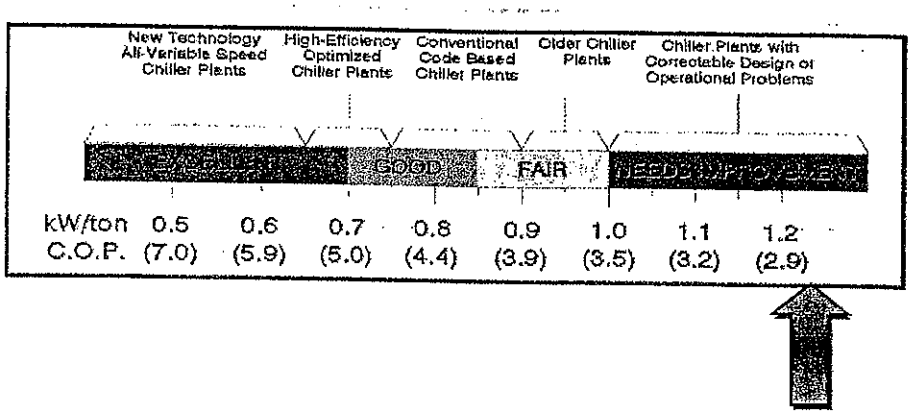

Plot E-1 and E-2 show the power consumption profile and histogram on percentage occurrence of power are distributed respectively. This information is useful in future when sizing switch gears, transformers and main circuit breakers in near future.

$$\text{System Efficiency} = \frac{(\text{Chiller kW} + \text{CHW and CW Pump kW} + \text{CT kW})}{\text{Cooling Tons}}$$

System Efficiency can only be credible when load profile is in stable conditions. The overall plantroom efficiency shows sizable rooms for further improvement. From Plot E-3 & E-4, we could observe the efficiency mean is about 1.25kW/ton. Efficiency is poor as most of the time the chillers is running on part load. As recommended in ASHRAE journal, healthy and achievable condition should be 0.8kW/ton or below. (Potential of 35% improvement)

Parameters	Value Based on 24hrs Operation		Remarks (If Any)	Appendix
kW/Ton	Max.	1.5	Occurrence of efficiency should be not lesser than 1 %	E-3 & E-4
	Avg.	1.25	Highest Occurrence (30.7%)	
	Min.	1	Occurrence of efficiency should be not lesser than 1 %	

ASHRAE Journal

10. COMMON AREA LIGHTING STUDY

During the audit exercise, we also look into lux level at common area. The following are our measurement result,

LOCATION	AREA	MIN LUX LEVEL	MAX LUX LEVEL	AVERAGE LUX LEVEL	BASED ON SS 531	DIFF
Reception Counter		220	118	169		19
Reception Counter	Computer Desk	120	85	103		-48
Atrium	Middle	37	39	38		-62

Guest Room 16-10	Middle Area	96	118	107		-93
(Night time)	Study Table	237	241	239		39
Guest room Corridor	Under Fitting	104	134	119		19
	Between Fitting	119	164	142		42
B2 Carpark	Carpark Way	94	112	103		28
	Packing Area	80	112	96		21
B1 Carpark	Carpark Way	85	115	100		25
	Packing Area	75	102	89		14

From the above reading, we can see that many areas still falls within the acceptable range of *SS531:Part 1:2006 Code of Practice for Lighting of Work Places*. The few places which fall outside the range are the Grand ball Room Lobby, Ball Room and the 2nd level Lounge. These may be due to the operation requirements but improvement can be consider to these places.

Correct light mapping and selection of type of lighting shall be done to improve lighting coverage and reduce lighting energy usage.

One way is to consider the use of T5 lightings with low loss electronic ballasts. It will help to reduce lighting energy usage by about 30%. Correct light mapping will be able to improve light coverage and optimize energy usage. Advance lighting control such as motion sensor for staircase and toilet can be carefully implemented so as not to affect comfort level.
