WHY IS IT GREEN?

The Hydronic Balancing for each Fan Coil unit is guaranteed by the installation of the combined control and regulating valves of our “Cocon Series” in the Fan coil system. Energy can be saved via optimization of the pump by setting the desired flow. With our expertise in Hydronic Balancing and our wide range of products technical support you will have a secured high quality solution for your green building projects.

PRODUCT FEATURES

The innovative design of our Pressure Independent Control Vales “Cocon Series” combines multiple functions in one valve:

- multiple sizes and connections
- constant high valve authority
- differential pressure independent valve
- small dimensions
- insulation and accessories are available
- dynamic, hydronic balancing by setting the required flow rate on the hand wheel
- if the installation is extended or modified the valves do not require a readjustment

PRODUCT CERTIFICATION & COMPLIANCE

ISO 9001 Standards
